

VENTURA COUNTY FREIGHT CORRIDORS STUDY

How does freight travel through Ventura County?

VCTC, the Port of Hueneme, and Caltrans have partnered with the Southern California Association of Governments to develop the *Ventura County Freight Corridors Study*, which will identify and prioritize the most significant freight corridors for safer, more efficient, and sustainable freight connections.

We want to have your participation!

During Summer 2020, we will conduct a stakeholder outreach program to achieve meaningful public involvement in the development of the study. We will work with community and industry groups and the general public to refine the project objective, focus analysis efforts, and develop solutions with the greatest benefit to both the County's economic competitiveness and environmental health.

Project Objectives

Establish a thorough understanding of Ventura County's freight corridors

Support cleaner freight, reduce GHG emission and improve air quality

Promote Ventura County's industry and agricultural economy

Plan a transportation system that does not disproportionately impact disadvantaged communities

Develop innovative solutions to benefit both the economy and environmental health
