# VCbuspass

Ventura County's Regional Pass Program
October 1, 2021

### VCbuspass – Project Background / Timeline

### Two Goals

1 – Contactless regional fare payment system for Ventura County's operators.

2 – Ability to integrate with future technology, e.g., open payments.

→ July 2020 – Commission releases Request for Proposals
→ December 2020 – Contract award & project kickoff
→ April - June 2021 – Fleet Installation and Training
→ July 1, 2021 – "Phase one" – Online & in-person sales of reloadable card
→ September 20, 2021 – "Phase two" Mobile App launch

### **Contract Overview**

#### Agreement with Cubic-Delerrok

AT TROUBE

- Five-years following final system acceptance + Extension options
- Contract not to exceed value \$1.86M includes room for certain options, fleet expansion, or in the event of growth (100% rider adoption, i.e., 3M trips ann.)
- Charge to VCTC is per "tag" b/w \$0.04-\$0.09 based on usage.
- Contactless media includes mobile tickets (apps) and reloadable smartcards

## System Scope

- Onboard 6 fleets, including 2 general purpose Dial-a-rides (150+ vehicles)
- Sales at 7 ticket-counter locations, online fulfillment for card orders, online reloads of cards, and mobile app (i.e. self-service option)
- Equipment configurations based on individual fleet needs, e.g., handheld devices for Dial-a-ride mini-vans, or mounted pass readers in transit buses.
- Fare products include "Stored Value" (pay as you go), or unlimited ride passes for prescribed period (31-days).
- > Full fare and reduced fare passes available, based on rider eligibility.

Each transit operator uses same backend system with ability to set fares specific to its agency.

*System provides source of centralized data of sales and usage. Can be used for more regional planning. All agencies have similar visibility and access to the database.* 

Goal is to streamline reporting and revenues disbursement – moving away from paper records for sales and varying system reports between operators.

# **Performance to-date**

CTC

### Challenges

#### Challenges:

- Eight operators each with unique fare policies, fleets and resources
- Cellular communications and uptime considerations
- Rapidly changing ridership and policy responses
- Controlling for buy-in, quality service and consistent messaging across multiple agencies and 3<sup>rd</sup> parties
- Hardware landscape considerations. Most flexible ('visual validation') not necessarily the most robust.
- Time shifts from "cash (and pass) handling" to data handling.

### Next Steps

### *Next Steps / Upcoming Objectives:*

- Launch of InComm 'brick and mortar' retail network
- Build out a backup reporting process for communications gaps
- Benefit programs: Colleges/Universities, social service agencies, large employers (e.g., VCAAA, Cottage Hosp.)
- Incorporate new modes and additional fleets
- Open payments with contactless EMV (credit cards)
- Fleet Expansion incorporating paratransit fleets / other on-demand services
- 3<sup>rd</sup>-Party Integrations, e.g. traveler apps, Apple, Google, Lyft, Uber, etc.
